82 platform runs on Baari-eval, 4 October, 17:17 to 20:38 IST · evals/out/runs.csv

- 1
Stopped at the vote
So: GPT-5.4, best of five.

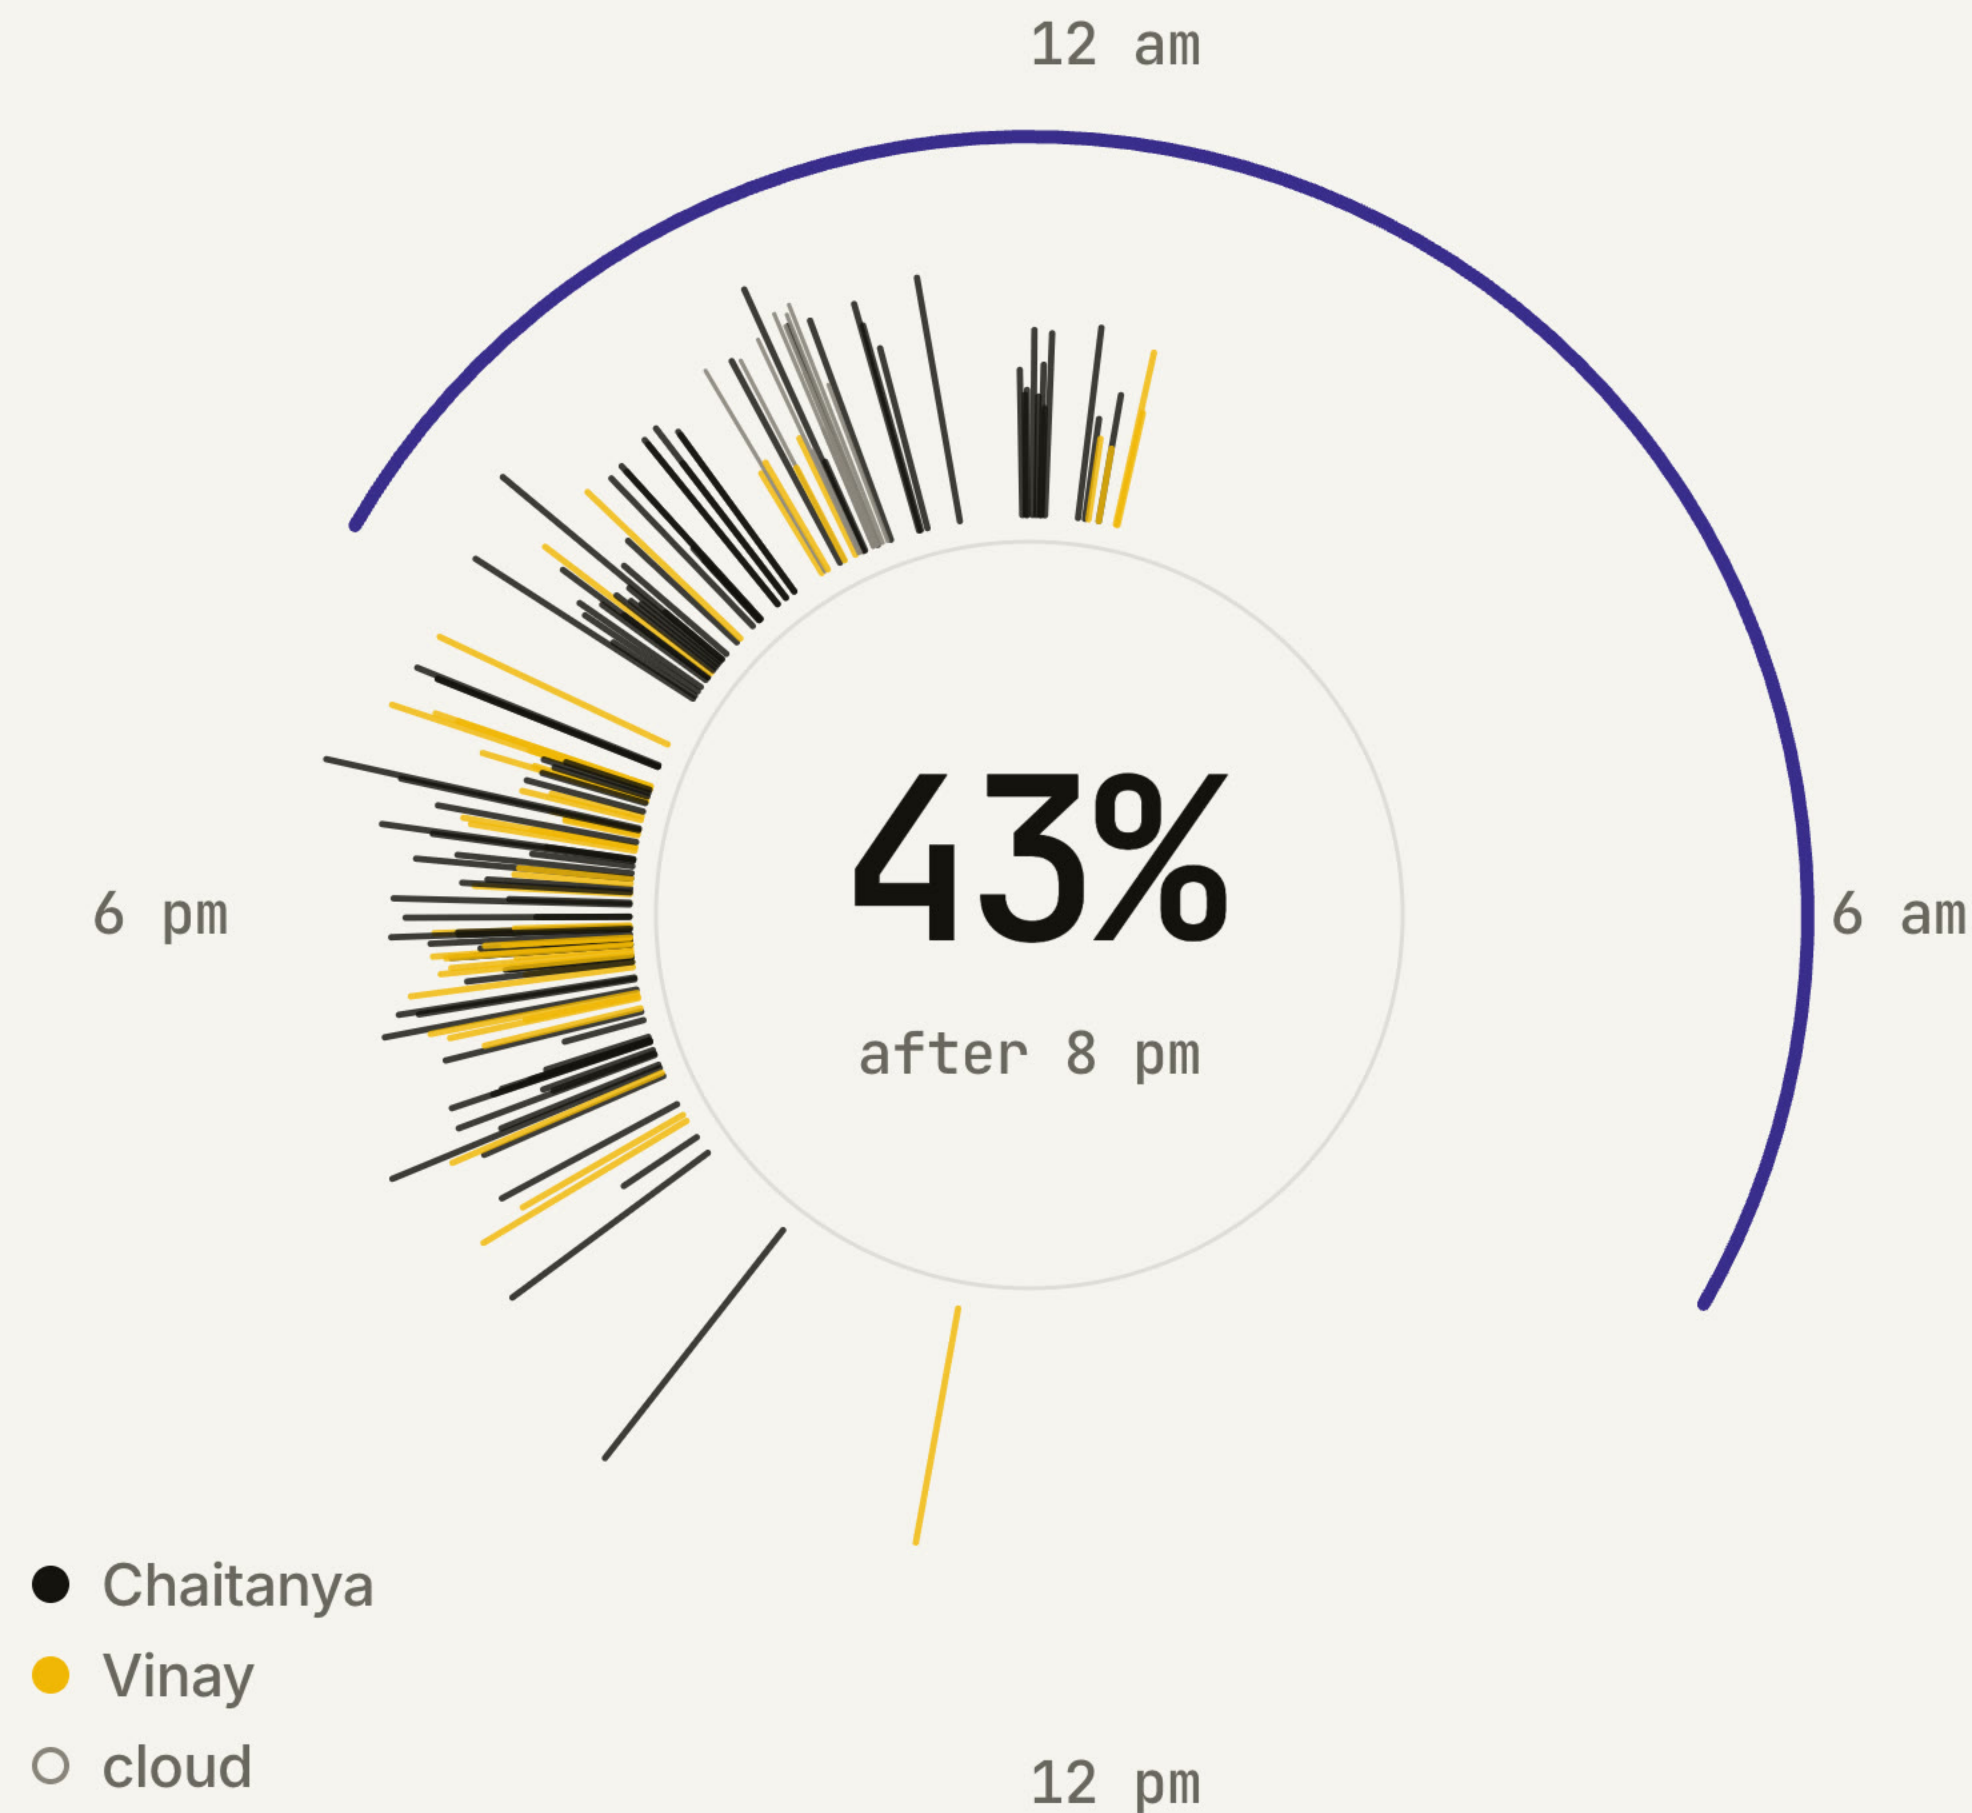

2
Couldn't hear voice notes
So: every argument spelled out.

3
The platform timed out
So: one short run per phase.

4
Spent money it didn't have
So: the balance check is code.

Do log. 129 crore tokens.

Nearly one per Indian.

git log, Claude Code transcripts, ccusage · both laptops, Baari only, 9 Oct

Not yet.

One household

on our rails

Four eaters, fixed

in the live agent; prompt v13 reads the app's count

Two options, always

a mother asked for four

“It should be like this.”

mother who cooks herself, after a ten-minute demo •
reacted to a demo, hasn't used it

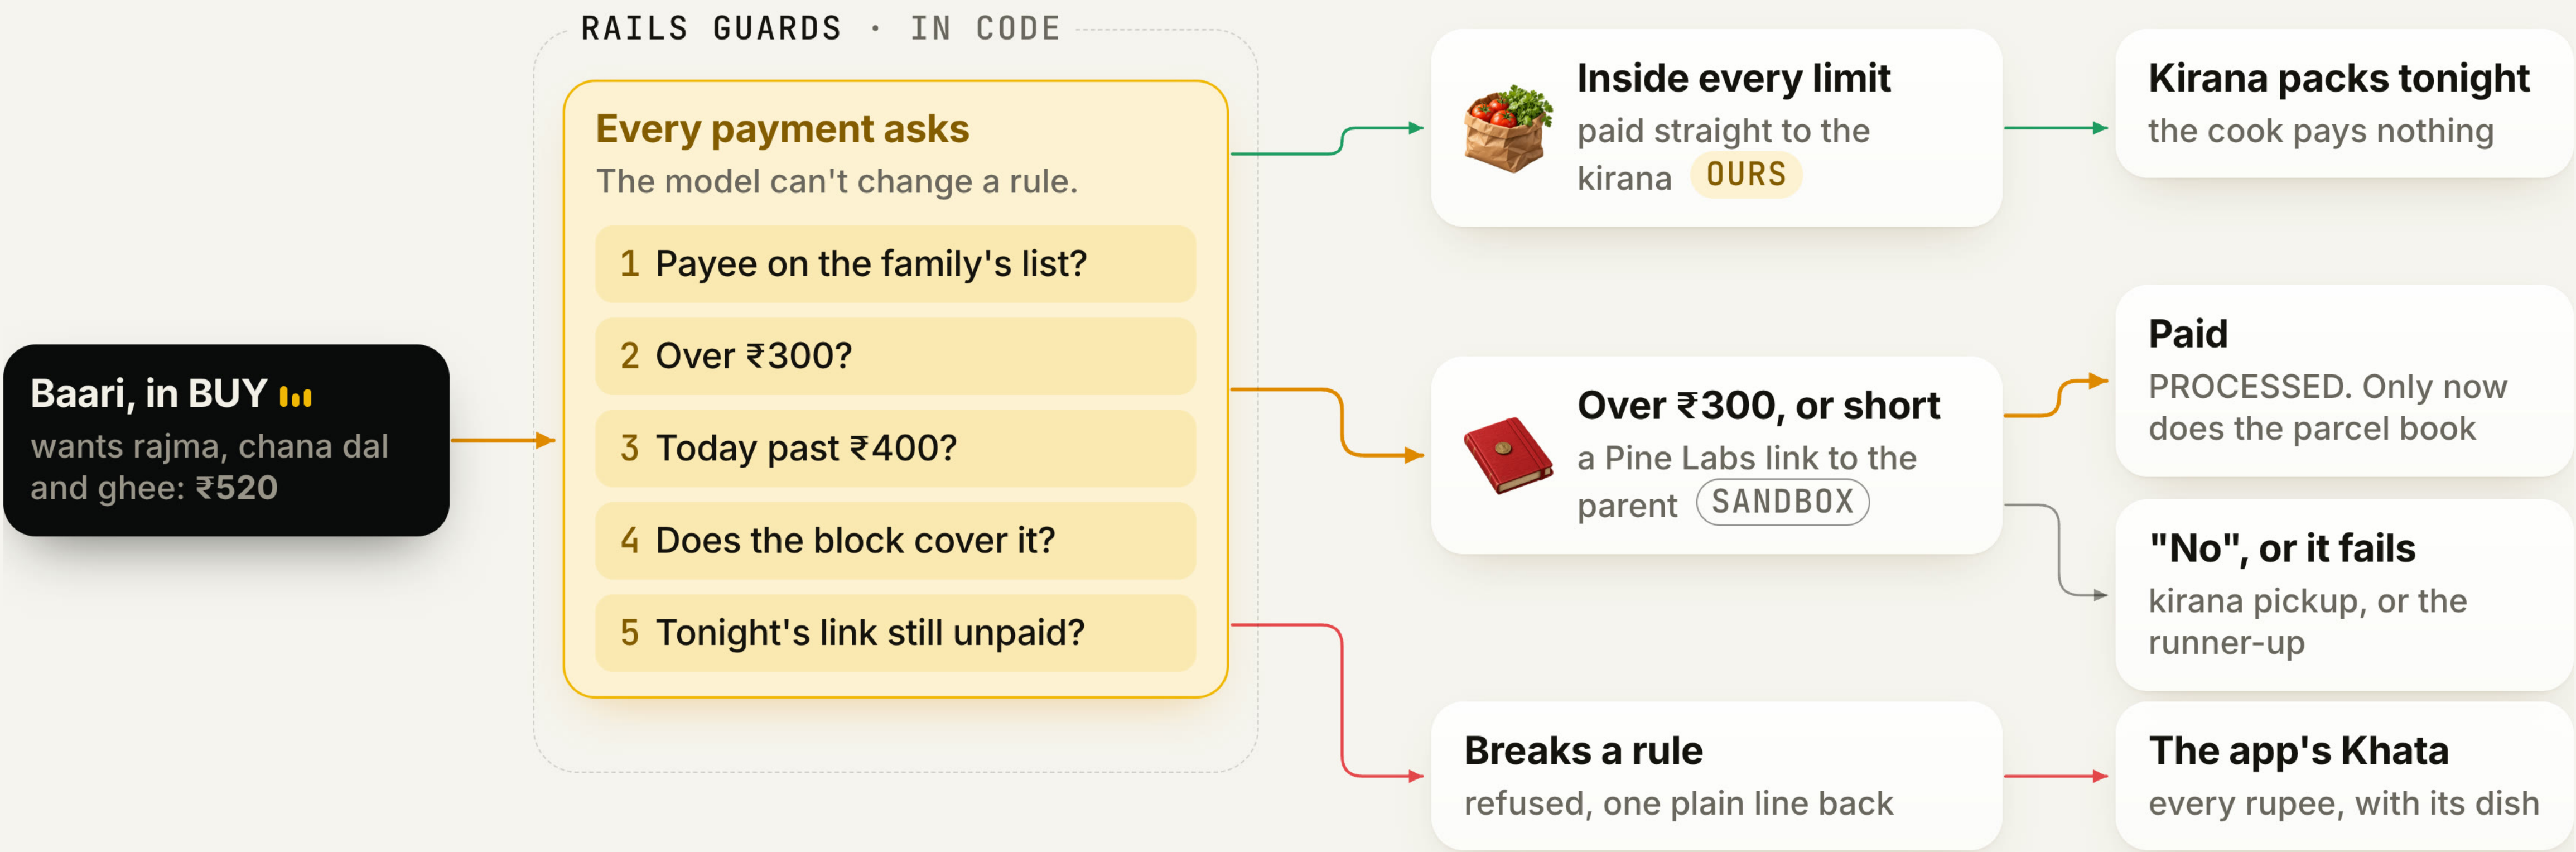

NEXT

- 1 **Headcount that changes**
- 2 **Mummy's list**
- 3 **Five-day plan**
- 4 **2 to 4 options**
- 5 **Trip pause**
- 6 **No-cook mode**

GPT-5.4 booked the parcel before checking the money. Four runs in a row.

after the prompt said "check first" twice. eval E04, 4 Oct

So the rules moved out of the model.

The ask: an agent mandate.

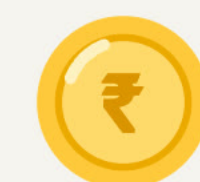

```
policy    payees · ask_above 300 · day_cap 400           // E04
reason    "rajma for tomorrow"                          // families see why
events    refused · paid → webhook
next      one delegate, many households
```

One limit, approved once,
by the parent who pays.

₹400 a day

Ask above ₹300

The TV

Every run starts from zero. Rails writes the brief.

The model keeps nothing between runs. Each time Baari wakes, rails hands it the rules, a fresh brief about tonight, and the note its last run left. What Baari knows is exactly what we chose to put there, and nothing else.

THE BRIEF FOR ONE RUN

LOCK, Thursday 21:30

as rails writes it, shortened

PHASE: LOCK NOW: 2026-10-08 21:30 IST DATE_FOR: 2026-10-09	Which job, and when. Baari never guesses the time or which meal it's planning.
TURN: Vinay holds tonight's baari. NEXT: Mummy. MONEY: Vinay approves.	Whose turn it is, from the app and the family's taps.
EATING 3 for 2026-10-09: Vinay, Papa, Behen. Away: Mummy (Mummy, telegram, 21:12). Guests 0.	Who's eating, counted by rails from the app's switches and what people said.
NEEDS (rails, from the live pantry, for Rajma chawal and 3 eating): Sharma Kirana: tomato 300 g. Delhivery: rajma 250 g, rice, atta. ...	The shopping list. Rails works it out from the live pantry. Baari places the order, it doesn't do the maths.
PREP: Rajma chawal needs rajma soak by 22:30 (8 h): possible tonight, someone home: Vinay, Papa, Behen.	Can the prep happen, and who's home to do it. No soak gets promised that can't be done.
LEARNED: Papa: no aloo on his plate (confirmed, app).	What the family confirmed. Health only ever arrives as a plate rule.
HANDOFF: {"phase_done":"SHORTLIST", "shortlist":["Rajma chawal","Lauki chana dal"], "sent":["S3:Vinay","S3:Mummy","S3:Papa"]}	The note the last run left. Rails keeps it, so the next run picks up where this one stopped.

Lines that appear when they apply: FROM (who woke it), EVENT (what went wrong), CUISINE, GUEST.

AROUND IT

EVERY RUN

The rules

Prompt v12, **26,695 characters**. Seven hard limits come first, then the rules for each phase, each with an id Baari has to cite for every decision.

WHEN IT SEARCHES

Kitchen facts

The knowledge base: the house dishes with recipes for four, Sharma Kirana's stock, the household routine. When it disagrees with the brief, the brief wins.

WHILE IT WORKS

What the tools say

New messages, the block's balance, whether a link is paid, the pantry. Read live, through the bridge, every time.

WHAT IT LEAVES BEHIND

Every decision, with its reason

D1	Rajma chawal, Vinay's pick	V2
D2	Papa's plate: no aloo	L3
D3	Cook for 3, Mummy is out	S6

The app's **Kyun?** reads these. A fresh HANDOFF goes back to rails for the next run.

LEFT OUT ON PURPOSE

❌ Old chats

It gets tonight's facts, not last week's messages.

❌ Money over ₹300

Rails asks Vinay. The model can't approve it.

❌ Diagnoses

Rails refuses a health fact unless it's said as a plate rule.

❌ Hearsay

A fact about someone waits until that person confirms it.

❌ A stale pantry

The kitchen is read live, never from an old snapshot.

One door was open. Everything goes through it.

AgenticOrg's validator refused every custom tool we registered for Telegram and Pine Labs. One native connector passed and let us set its address: **ElevenLabs voice**. So Baari makes voice-tool calls, and rails reads each one as the real action.

REFUSED BY THE VALIDATOR

17 names refused, 4 October (V1)

- mep_telegram__send_text_message

✓ elevenlabs_gnanibaari passed

Naming our tools after Delhivery's would also have passed, and lied to the model about what they do. We didn't.

THE PHRASEBOOK

BAARI CALLS	WHAT RAILS DOES	WHERE IT LANDS
get_voice • reads		
tg.updates	New messages, taps and voice notes from the family	TELEGRAM
hh.kitchen	The live pantry, and what was cooked last	RAILS
pl.balance	What's left in the Reserve Pay block	RESERVE PAY DEMO
pl.order	Whether Vinay paid the checkout link	PINE LABS UAT
kr.order	Sharma Kirana's order and its bill	KIRANA BOOK
create_voice_clone • writes, by name		
tg.send	A message, with buttons to tap	TELEGRAM
tg.voice	A voice note, for Sunita in Hindi	TELEGRAM
pl.link	A real checkout link, sent to Vinay with a pay button	PINE LABS UAT
pl.debit • pl.payee	Pay from the block, or pay the kirana	RESERVE PAY DEMO
hh.away • hh.guests	Who's eating tomorrow	RAILS
hh.task • hh.learn	Tonight's prep task, or a fact to remember	RAILS
voice tools • used as voice		
speech_to_text	Gnani hears a voice note, in Hindi or Hinglish	GNANI
text_to_speech	Gnani speaks Sunita's morning brief	GNANI

ONE CALL, AS BAARI MAKES IT

```
create_voice_clone(  
  name: "pl.link",  
  labels: { to: "Vinay", amount_paise: 52000,  
            reference: "BAARI-2026-10-09-staples",  
            text: "Rajma, rice and atta" })  
  
voice_id: "<order_id>:LINK_SENT"
```

THE ANSWER RIDES BACK IN THE VOICE'S ID

msg:<message_id>

The message reached them

<order_id>:LINK_SENT

Vinay has the pay button

fail:APPROVAL_REQUIRED

Over ₹300 without Vinay's yes. Nothing moved

fail:SAY_IT_AS_A_PLATE_RULE

A diagnosis, refused. Rails keeps only what goes on the plate

Every write passes the guards first and lands in the call log, the same as it would over a native tool.
